

## SEB TUTORIAL FOR STUDENTS

- Download and install the software Safe Exam Browser **version 2.4 for Windows** (NOT the version 3.0) or other versions for Mac and iOS, at this link:  
[https://safeexambrowser.org/download\\_en.html](https://safeexambrowser.org/download_en.html)
- DON'T install the programme inside a virtual machine
- DON'T start the program, don't configure anything
- Before the exam, deactivate the following:
  - Antivirus (in particular Avast, Norton, NOD)
  - Skype
  - Firewall or proxy
- Access as usual the platform with your University credentials, whatever browser is fine (Chrome, Firefox...)
- Click on the file SEB which has been uploaded on the platform by the teacher, and open it (or directly after the download or double clicking on the saved file)
- The file automatically starts the program Safe Exam Browser which connects to the course of the teacher; being a new browser, the system will ask again the access to the platform
- Access the test according to the instructions given by the teacher
- At the end, to exit SEB, select the icon below on the right and insert the exit password which has been set, in case, by the teacher
- **NOTICE: we recommend to install the program and to make a test to check it works, connecting to the testing course some days before the exam**
